CHSH Frenzy Excites Investors! Brokers Try To Take Control!

China Shoe Holdings Inc. (CHSH)
$0.50

Shares prices climbed up and down as brokers tried to push share prices down to grab CHSH at lower prices. This is set up to explode. Grab it now and reap the profits. Get on CHSH first thing Wednesday!

Additional checks can follow a similar strategy to that of the RSS validator, as Mark Pilgrim had documented in his Inside the RSS Validator column.
You are all welcome to visit.
versioning People are requesting a version number to be able to switch between t wo different modes of rendering.
The semantics of element will never change as well, because it might break the i ntent of authors from the past who have written accordingly to a previous versio n.
Related: KodakGallery.
I have lots of fond memories of Austin; maybe we can make a few more next week?
Read the remarkable experience of OWL Working Group, for example.
The semantics of element will never change as well, because it might break the i ntent of authors from the past who have written accordingly to a previous versio n.
There is nothing shocking about this bug, but the speed at which it was processe d and fixed.
Orthogonal Specifications: When two specifications are orthogonal, one may chang e one without requiring changes to the other, even if one has dependencies on th e other.
My personal experience with python APIs for RDF suggests that, for example, ther e’s a core of cwm and rdflib and redland that is the same except for a few coin-toss issues.
And there are several mature Java APIs and the tabulator has an RDF store in Jav ascript.
There is nothing shocking about this bug, but the speed at which it was processe d and fixed.
But maybe we were in "mostly harmless" or "first do no harm" mode, letting the m arket establish what’s really needed.
Authoring tool: The mechanism to change the version is not defined in a conversi on context.
There is a very simple answer to this: The requirements have changed.
Many of the improvements and changes have been made possible by using a number o f new or updated tools and libraries.
John Robb’s WeblogSkating to where the puck will be.
We appreciate the transparency and the plain-english explanation.

Shawn Henry is presenting Accessiblity: A Report From the Trenches this Sunday.
The Feed validator works, and so does its Quality Assurance process, as demonstr
ated in the prompt fixing of a small bug in its implementation of a faulty, not
widely used specification.
My personal experience with python APIs for RDF suggests that, for example, ther
e’s a core of cwm and rdflib and redland that is the same except for a few coin-
toss issues.
It wasn’t until the arrival of IIOP, an on-the-wire CORBA format, that the rubbe
r hit the road and the interoperability issues got addressed.
Good to hear that the idea doesn’t sound completely heretic to you.
The rest is a matter of making sure that attributes and elements follow some est
ablished schema.
The semantics of element will never change as well, because it might break the i
ntent of authors from the past who have written accordingly to a previous versio
n.
Women applications are welcome.
Just need to learn more about it before I can have an opinion.
Nothing and noone is perfect, that’s why we have QA.
If you are around, why not join these sessions and get a chance to see, and part
icipate to, interesting discussions?
To ensure products get released with a minimum amount of bugs, and to guarantee
that bugs found after release can be fixed, if possible in a timely manner and n
ever happen again.
not to mention the music festival.
I fly into Austin Monday, just in time to see the Growth and Evolution of Microf
ormats panel; then I fly home Tuesday.
The value of this attribute specifies which HTML DTD version governs the current
 document.
If you are in the mood to get involved, please, visit the HTML Working Group ho
me page.
This is why finding bugs is good news, and the best use of one’s energy is not t
o worry about them, but to help find them, report them, patch them and build reg
ression test cases for them.
APIs are more like interfaces than components, but they tend to be tied to platf
orms.
This may sound a little odd, until one knows precisely what validation is.
Shawn Henry is presenting Accessiblity: A Report From the Trenches this Sunday.
This may sound a little odd, until one knows precisely what validation is.
It takes indeed a lot more time to do, it requests more efforts from the Working
 Group, but it also means easier to use for the Web community in the end.
Any programs starting from scratch has to implement everything from the start.
Troubleshooting I had trouble compiling SGML::Parser::OpenSP because there were
two versions of libosp on the system.
But I had very strong misgivings about crossing that line.
Good to hear that the idea doesn’t sound completely heretic to you.
You are welcome to contact me if you want to know more details about the HTML WG
.
Troubleshooting I had trouble compiling SGML::Parser::OpenSP because there were
two versions of libosp on the system.
started with a smaller scope.
I will try to create a space where people will find valuable information about t
he HTML Working Group work.
This attribute has been deprecated because it is redundant with version informat
ion provided by the document type declaration.
If you are around, why not join these sessions and get a chance to see, and part

As of today, when a specification is designed, it follows this path: Working Dra
ft, Last Call, Candidate Recommendation, Proposed Recommendation, and then Recom
mendation.
I have just moved my personal site over to a new Typepad location.

: Space Ghost Coast to Coast - Vols.
I recently addressed this question again in a more light-hearted manner.
And with that, I believe the validator could report errors and warnings for thin gs that goes far outside the scope of the HTML specification, like malformed HTT P headers, etc.

New deals from Meritline!
Versioning is one of the topics addressed in Web Architecture.
Please let us know what you think.
It is, rather, a solution to an unavoidable problem: nothing is perfect.
John Robb’s WeblogSkating to where the puck will be.
The Web community as large, including some developers, expressed through the yea rs its frustration with incomplete implementations, lack of interoperability, am biguities in specifications.
Chris Wilson and I are the co-chairs.
The debate will have certainly influences on discussions on the Technical Archit ecture Group.
Some users of the validator will be puzzled to see their once-validating documen ts now rejected by the validator.
- Hot deals and great bargains posted daily.
onsgmls -v should tell you the version.
I believe most developers think "conformance check" when they validate their doc uments and not "validation against a DTD and nothing else".
An opt-in mechanism specific to a browser vendor makes it difficult to manage in an interoperable way.
"validator" has many meanings and in the context of HTML that includes things li ke checking that an a element does not contain other a element descendants.
I recently addressed this question again in a more light-hearted manner.
We appreciate the transparency and the plain-english explanation.
And I heard many times that people who don’t see themselves writing Java program s are happy to develop XSLT transformations.
On the other side a version number accessible from the body will make it easy to change.
Warnings about broken HTTP headers is a pretty good idea.
Versioning is one of the topics addressed in Web Architecture.
Free Facebook T-Shirt from Chase!
It is rare enough to be noted.
There has a been a lot of debate in April on the HTML WG mailing list about vers ioning.
Maybe we were asleep at the wheel and we could and should have prevented the mes s.
Many of the improvements and changes have been made possible by using a number o f new or updated tools and libraries.
All that matters is that the constraint is validated.
Authoring tool: The mechanism to change the version is not defined in a conversi on context.
There’s no real problem here.
Any programs starting from scratch has to implement everything from the start.
OpenId or Typekey Users Your blog URL: About you If you do not have an OpenId o r Typekey account, please tell us about you: Name: Email: Remember personal info ?
And there are several mature Java APIs and the tabulator has an RDF store in Jav ascript.
Preferably, the Working Group SHOULD be able to demonstrate two interoperable im plementations of each feature.
Many of the improvements and changes have been made possible by using a number o f new or updated tools and libraries.
See this blog entry for details.

Validators are extremely important tools for the adoption of technologies, and i
t is perfectly normal to be concerned about their quality.
To be able to enter the next phase of Proposed Recommendation, the WG must respe
ct certain criteria.
I used the latest version from CVS, but the one from CPAN should work too.
And this is precisely why there is a Quality Assurance process.
Please let us know what you think.
Although more expressive, these technologies are in no way a solution to the com
plexity of describing markup languages, as explained in e.
