

Substitutions on Stepped Surfaces

Thomas Fernique

LIRMM (Montpellier, France)

WOWA, 7 June 2006

Introduction (1/3): Sturmian words

word: concatenation of letters (finite alphabet);

complexity: number $p(n)$ of factors of size n ;

Sturmian words: aperiodic words of minimal complexity.

$$u = 121121211211212112121121 \dots \rightsquigarrow p(n) = n + 1.$$

Introduction (2/3): Stepped lines

Straight half-line (red) \rightsquigarrow stepped line (blue) \rightsquigarrow 2-letter word:

Morse&Hedlund: Sturmian words \equiv irrational slopes

Introduction (3/3): Stepped curves

funct. curve (red) \rightsquigarrow stepped curve (blue) \equiv 2-letter word:

Sturmian words: aperiodic stepped curves of minimal complexity

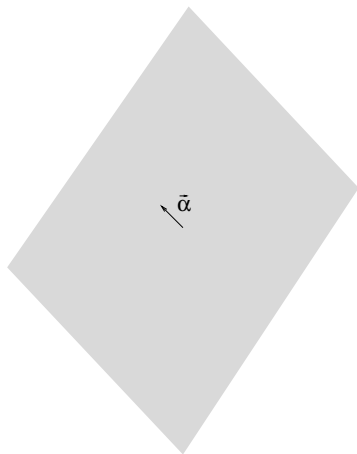

Outline

- 1 Stepped planes
 - Digitizations of real planes
 - Sturmian 2-dim. words
- 2 Stepped surfaces
 - Digitizations of real surfaces
 - Flips on stepped planes
- 3 Substitutions
 - Sturmian substitutions
 - Generalized substitutions

Outline

- 1 Stepped planes
 - Digitizations of real planes
 - Sturmian 2-dim. words
- 2 Stepped surfaces
 - Digitizations of real surfaces
 - Flips on stepped planes
- 3 Substitutions
 - Sturmian substitutions
 - Generalized substitutions

- real plane normal to $\vec{\alpha}$
- *stepped plane*
- 3-letter 2-dim. word

- real plane normal to $\vec{\alpha}$
- *stepped plane*
- 3-letter 2-dim. word

- real plane normal to $\vec{\alpha}$
- *stepped plane*
- 3-letter 2-dim. word

Outline

- 1 Stepped planes
 - Digitizations of real planes
 - Sturmian 2-dim. words
- 2 Stepped surfaces
 - Digitizations of real surfaces
 - Flips on stepped planes
- 3 Substitutions
 - Sturmian substitutions
 - Generalized substitutions

Recall: aperiodic digitizations of lines \equiv Sturmian words.

Definition (Vuillon,98)

Sturmian 2-dim. words \equiv aperiodic digitizations of planes

Outline

- 1 Stepped planes
 - Digitizations of real planes
 - Sturmian 2-dim. words
- 2 Stepped surfaces
 - Digitizations of real surfaces
 - Flips on stepped planes
- 3 Substitutions
 - Sturmian substitutions
 - Generalized substitutions

funct. surface \rightsquigarrow stepped surface \rightsquigarrow 3-letter 2-dim. word (not all):

Outline

- 1 Stepped planes
 - Digitizations of real planes
 - Sturmian 2-dim. words
- 2 Stepped surfaces
 - Digitizations of real surfaces
 - Flips on stepped planes
- 3 Substitutions
 - Sturmian substitutions
 - Generalized substitutions

Flip: adding/removing a unit cube

Theorem

Stepped surface \equiv *stepped plane* + *flips*.

Outline

- 1 Stepped planes
 - Digitizations of real planes
 - Sturmian 2-dim. words
- 2 Stepped surfaces
 - Digitizations of real surfaces
 - Flips on stepped planes
- 3 **Substitutions**
 - **Sturmian substitutions**
 - Generalized substitutions

substitution: non-erasing morphism: $\sigma(u \cdot v) = \sigma(u) \cdot \sigma(v)$;

Sturmian substitution: maps Sturmian words to Sturmian words.

$$\sigma : \begin{array}{l} 1 \rightarrow 12 \\ 2 \rightarrow 1 \end{array} \rightsquigarrow \sigma(12112\dots) = 12112121\dots$$

\rightsquigarrow useful for *generating* and *classifying*

Outline

- 1 Stepped planes
 - Digitizations of real planes
 - Sturmian 2-dim. words
- 2 Stepped surfaces
 - Digitizations of real surfaces
 - Flips on stepped planes
- 3 Substitutions
 - Sturmian substitutions
 - Generalized substitutions

Generalized substitution: map on unit faces of \mathbb{R}^3 (Arnoux-Ito).

Theorem

Generalized substitutions map stepped surfaces to stepped surfaces and stepped planes to stepped planes.

Conclusion

2-letter words	→	stepped surfaces
Sturmian words	→	aperiodic stepped planes
Sturmian substitutions	→	generalized substitutions
complexity $n + 1$	→	?
substitutions	→	?

Penrose stepped surfaces?

Conclusion

2-letter words	→	stepped surfaces
Sturmian words	→	aperiodic stepped planes
Sturmian substitutions	→	generalized substitutions
complexity $n + 1$	→	?
substitutions	→	?

Penrose stepped surfaces?
